

알고리즘 실습 보고서

- QuickSort -

전공 : 컴퓨터공학과

분반 : 05반

학번 : 201502085

이름 : 이규봉

1. 실행 환경

과제의 코드를 테스트한 환경은 아래와 같습니다. 따로 사용한 라이브러리는 없습니다.

- Windows 10
- Pycharm 2019.02
- Python 3.7.4

2. 과제 설명

- QuickSort 구현

3. 문제 해결 방법

- 문제를 해결하기 위해 자신이 사용한 방법, 아이디어에 대한 설명
(구현한 코드에 대한 설명 등)

실습자료 ppt에 나온대로 4개의 함수인, `quick_sort`, `quick_sort_with_random`, `partition`, `randomized_partition`을 각각의 의사코드에 따라 구현했습니다.

`quick_sort`와 `quick_sort_with_random`는 각각 $p < r$ 일 때 `partition`을 호출합니다 (`quick_sort_with_random`는 `randomized_partition`를 통해 `partition`을 호출) `partition`은 p 번째 원소부터 r 번째 원소까지 $A[r] \geq A[j]$ 인 경우에 대해, 스위핑 합니다. 그 후 반복문을 빠져 나와 `index`를 1 증가시키고 $A[index]$ 와 $A[r]$ 을 스위핑하고 `index`를 리턴합니다. 이 `index` 값을 `quick_sort`, `quick_sort_with_random`가 리턴 받아, 이 값을 q 라고 하면, `quick_sort(A, p, q-1)`, `quick_sort(A, q+1, r)`을 (또는 `quick_sort_with_random`를) 재귀적으로 호출합니다.

4. 결과 화면

1222,1223,1224,1225,1226,1227,1228,1229,1230,1231,1232,1233,1234,1235,1236,1237,1238,1239,1240,1241,1242,1243,1244,1245,1246,1247,1248,1249,1250,1251,1252,1253,1254,1255,1256,1257,1258,1259,1260,1261,1262,1263,1264,1265,1266,1267,1268,1269,1270,1271,1272,1273,1274,1275,1276,1277,1278,1279,1280,1281,1282,1283,1284,1285,1286,1287,1288,1289,1290,1291,1292,1293,1294,1295,1296,1297,1298,1299,1300,1301,1302,1303,1304,1305,1306,1307,1308,1309,1310,1311,1312,1313,1314,1315,1316,1317,1318,1319,1320,1321,1322,1323,1324,1325,1326,1327,1328,1329,1330,1331,1332,1333,1334,1335,1336,1337,1338,1339,1340,1341,1342,1343,1344,1345,1346,1347,1348,1349,1350,1351,1352,1353,1354,1355,1356,1357,1358,1359,1360,1361,1362,1363,1364,1365,1366,1367,1368,1369,1370,1371,1372,1373,1374,1375,1376,1377,1378,1379,1380,1381,1382,1383,1384,1385,1386,1387,1388,1389,1390,1391,1392,1393,1394,1395,1396,1397,1398,1399,1400,1401,1402,1403,1404,1405,1406,1407,1408,1409,1410,1411,1412,1413,1414,1415,1416,1417,1418,1419,1420,1421,1422,1423,1424,1425,1426,1427,1428,1429,1430,
```

input으로 들어갔던 data05.txt 파일 내의 숫자들이 모두 정렬되어 1부터 32767 까지의 숫자들이 오름차순으로 정렬되어 있는 것을 알 수 있습니다.

5. 느낀점 및 고찰

퀵 소트 자체는 자료구조 시간에도 구현해 보았었지만, random으로 3개의 숫자를 뽑아 파티셔닝 하는 것은 처음 구현해보아 흥미로웠습니다. 무작위로 뽑기 때문에 시행할 때마다 quick_sort_with_random에 걸리는 시간이 달라졌고, quick_sort보다 느릴 때도 많이 있었습니다.
